

## Redirección - Redireccionar el Output

El símbolo de redirección del Output (>) indica al Shell que redirija la salida de un comando a un archivo específico en lugar de a la pantalla.

Por ejemplo, el comando “date” imprime la fecha actual en la pantalla, pero si usamos el símbolo de redirección “>” seguido del nombre de un archivo, la fecha será redirigida a ese archivo:

A screenshot of a macOS terminal window titled 'jorge -- -bash -- 80x24'. The terminal shows a series of commands and their outputs. The first command is 'date', which outputs 'Wed Apr 24 18:34:29 CST 2024'. The second command is 'date > fecha.txt', which successfully redirects the output to a file named 'fecha.txt'. The third command is 'ls', which lists the contents of the current directory, including 'AndroidStudioProjects', 'Applications', 'Desktop', 'Documents', 'Downloads', 'Library', 'LinuxTests', 'MetLife \_ Reembolso OnLine.pdf', 'Movies', 'Music', 'Pictures', 'Postman', 'Public', 'fecha.txt', 'test.txt', 'tests', and 'training'. The fourth command is 'cat fe', which outputs an error message: 'cat: fe: No such file or directory'. The fifth command is 'cat fecha.txt', which outputs the date 'Wed Apr 24 18:34:37 CST 2024'. The terminal ends with a prompt 'MacBook-Pro-de-Jorge:~ jorge\$' and a cursor.

```
MacBook-Pro-de-Jorge:~ jorge$ date
Wed Apr 24 18:34:29 CST 2024
MacBook-Pro-de-Jorge:~ jorge$ date > fecha.txt
MacBook-Pro-de-Jorge:~ jorge$ ls
AndroidStudioProjects      Music
Applications               Pictures
Desktop                   Postman
Documents                 Public
Downloads                 fecha.txt
Library                   test.txt
LinuxTests                tests
MetLife _ Reembolso OnLine.pdf  training
Movies
MacBook-Pro-de-Jorge:~ jorge$ cat fe
cat: fe: No such file or directory
MacBook-Pro-de-Jorge:~ jorge$ cat fecha.txt
Wed Apr 24 18:34:37 CST 2024
MacBook-Pro-de-Jorge:~ jorge$
```
